

Task-1: Web Development Frameworks & Libraries

Lecture 1 _ Assignment

Name: Mohamed Abdallah Abdelkader Elgendi

Section: Section 5

Submitted to: Dr. Hend Bayoumi

The Task :

Research the following web development frameworks and libraries! What is it? What is it used for? Is it a framework or a library? What programming language or technology is it associated with?

The Solution : Frameworks & Libraries Comparison Table

Framework	What is it?	What is it used for?	Framework or Library?	Associated Language / Technology
Spring Boot	An extension of the Spring ecosystem designed to simplify Java web application setup and development.	Building enterprise systems, cloud-native applications, and scalable microservices.	Framework	Java (JVM)
ASP.NET (Core)	A high-performance, cross-platform web framework maintained by Microsoft.	Developing enterprise web applications, REST APIs, and real-time web services.	Framework	C# (.NET)

Express.js	A minimalist, flexible, and unopinionated backend tool for server management and routing.	Creating lightweight REST APIs, backend services, and web middleware.	Framework <i>(Micro-framework)</i>	JavaScript / TypeScript (Node.js)
Django	A high-level, "batteries-included" web framework built around the MVT architecture.	Rapid development of data-driven web platforms, full-stack applications, and CMS systems.	Framework	Python
Laravel	A full-stack web framework known for its clean syntax and MVC architectural pattern.	Developing web applications, handling database migrations, and authentication workflows.	Framework	PHP
